

Saved rollout errors across the complete prediction horizon

- Adaptive (legacy objective)
- Fixed MSE, $r=0.019$
- Fixed MSE, $r=0.015$
- Fixed legacy NLL, $r=0.015$

(a) WaterDrop: 995 predicted steps

(b) Sand: 314 predicted steps

Means across 30 saved trajectories per method; one saved checkpoint per method. No training-seed variability is shown.
Vertical guides mark step 200. These legacy artifacts contain 995 (WaterDrop) and 314 (Sand) future predictions.
