

SYNTHETIC CHECK - Goop3D | 25,000 training updates

Fixed metadata median: source 1 | training seed 0 | 33 particles | H = 295

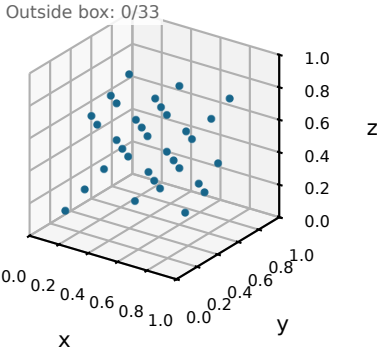

All particles shown. Shared physical bounds; red crosses mark out-of-box positions at the box edge.
3D: fixed orthographic view (elevation 25 degrees, azimuth -55 degrees).

● Particle inside metadata box ✕ Particle outside box (marker clamped)

Fixed example selected without policy errors. Missing and failed frames remain visible.
Cached risk 25% = mix / laggedrisk25; it is distinct from the previous-observed same-state diagnostic.
Truth is recovered only from agreeing saved targets. These panels do not estimate population performance.
